A Short Arm with a Big Reach

The XTENDER® Short Arm (X-SA-100) is a single arm that is durable and even more lightweight than our original articulating arm. The short arm will attach to a DSLR shoe mount, as well as a video camera 1/4"-20 or cold shoe mount. With the XTENDER®, you can move the light over the lens or off to the side. You can even position a monitor closer to your face for a better view of your work. Use it for lights, small video monitors or any other accessories.

Improve Your Product

As a photojournalist and editor for more than 21 years, D-PRO Inc. founder Shawn Dennison was always looking for ways to have better looking interviews, cleaner sounding audio and the ability to see a shot without looking through the viewfinder. Many of his colleagues also told him that they were frustrated with shooting interviews where the subject looked like a "deer in the headlights." Now with the XTENDER®, a light can be moved off the center axis for a much better shot. The XTENDER® was originally developed to enhance basic lighting techniques, but it is so versatile that it can be used in many more aspects of videography and photography.

X-plore the Possibilities

The XTENDER® can be mounted in two different configurations: a cold shoe mount, as well as the 1/4"-20 screw mount. There are multiple XTENDER® kits at a discounted price for our best-selling accessories, including the Monitor/Light Mount (MM-10), Cold Shoe Receiver (CSR-10), Light Post Mount Adapter (LP-10) and the Anton Bauer Power Cable Extension (AB-EXT).

Warranty

At D-PRO Inc., we believe in our product line, which is why we offer a limited warranty on all our products.
